Accessible PDFs options

PDFs need to be adapted to meet accessibility standards so they are accessible for people who use:

- screen readers
- screen magnification
- refreshable braille displays

A2i can make your PDFs accessible and offer 2 options.

1. **Adapt your existing PDF**
   We use your existing document and add full audio functionality. The visual design remains unchanged, so adding audio will make it partly accessible.
   - screen readers
   - screen magnification
   - refreshable braille displays

2. **Create a fully accessible PDF**
   We transcribe your document, adapt the fonts, colours and layout, and add full audio functionality to create a fully accessible version.
   - screen readers
   - screen magnification
   - refreshable braille displays

   - Improve accessibility
   - Be inclusive
   - Widen your audience
